

# A Sweeter Tweeter

Air Motion Transformer Technology

eve audio  
www.eve-audio.com

The **EVE Audio SC207** hits the sweet spot for project and professional studios with an air motion transformer (A.M.T.) tweeter, 7" fiberglass SilverCone woofer, built-in DSP and the most efficient bass port on the market for critical high-resolution audio listening.

The **next-generation A.M.T. tweeter** is a leap forward in sophisticated driver technology. A stiffer folded ribbon diaphragm coupled with wider front slots and a larger magnet in an ultra-precise housing provides higher output with less coloration, lower distortion and a wider useable frequency range up to 40kHz.

The result is **true high-resolution audio** that you can trust, mix after mix.
